v. King County

1043279

Tenth Motion to Leave to Supplement Petition for Review FINAL FILING

To: Becky Woodrow, Clerk of the Court

Dear Ms. Woodrow:

Enclosed is the side-by-side comparison of the 17 Structural Voids with the Virginia Mason 1/7/2018 spine MRI. Void #15 on page 7, set 1, line 39 of the 7/7/2023 denial order — falsely states that Dr. Nwosu “stood alone.” This MRI, in defendants’ possession at the time, directly corroborates Dr. Nwosu and proves they withheld decisive, network-provider trauma evidence.

This omission is both a structural due process violation (manufacturing an incomplete record) and fraud on the court (deceiving the tribunal on a material fact). This undeniable proof removes any legitimate basis for the denial and should end the litigation immediately. Please send direct deposit authorization to aedinquinn@gmail.com on 8/14/2025.

Respectfully,

Dated this 14th day of August, 2025

Side-by-Side Comparison – 17 Structural Voids vs. Virginia Mason 1/7/2018 Spine MRI

Void #	Structural Void Description	Virginia Mason 1/7/2018 Spine MRI Corroboration
1	Fatal contradiction of “sprain” theory	MRI timestamps structural trauma — no plausible “sprain” onset
2	Current Penn Medicine treatment voids denial	MRI confirms chronic trauma pathology consistent with ongoing treatment
3	Augmented surgery confirms collapse	MRI supports surgical necessity (fusions, cage, laminectomy)
4	Constitutional void triggered by continued treatment & collapse	MRI shows severe pathology existing long before denial
5	Relief required by medical reality & lack of rebuttal	MRI corroborates unrebutted expert opinion
6	Silent burden shift without notice	MRI in file at time of shift proves claimant met burden

Void #	Structural Void Description	Virginia Mason 1/7/2018 Spine MRI Corroboration
7	No rebuttal to Dr. Nwosu's testimony	MRI supports Dr. Nwosu, no competing medical report exists
8	Denial issued despite trauma-confirming MRIs	MRI is direct trauma evidence
9	Denial issued without completing evidentiary record	MRI was omitted from record despite availability
10	Appellant muted during critical hearing	MRI evidence unavailable for oral defense
11	Sprain theory unsupported by any diagnostic or expert evidence	MRI refutes "sprain" diagnosis
12	Barred from confirming whether defense reviewed trauma records	MRI confirms defense could not refute trauma
13	Penn Medicine causation link excluded	MRI shows trauma consistent with hip-spine causation link
14	Exclusion of relevant MRI from appellate review	MRI withheld from appellate record
15	On page 7, line 39 of the 7/7/2023 denial order, the court falsely states Dr. Nwosu "stood alone." This ignored the Virginia Mason 1/7/2018 spine MRI in defendants' possession, which directly corroborates Dr. Nwosu's causation opinion.	MRI shows trauma-anchored pathology aligning with Dr. Nwosu's testimony. Withholding it is both a structural due process violation and fraud on the court because it deceived the tribunal on a material fact.
16	Failure to reconcile Virginia Mason findings with denial rationale	MRI disproves denial's factual premise
17	Continued withholding of benefits despite conclusive proof	MRI provides conclusive proof justifying immediate reinstatement

Exhibit 8K

Document info

Result type: MRI Lumbar Spine
Result date: Jan 07, 2018, 10:48 a.m.
Result status: authenticated
Verified by: Kathleen Fink
Modified by: Kathleen Fink
Accession number: 9402735

Patient:	AEDIN QUINN	DOB:	May 01, 1963
----------	-------------	------	--------------

EXAMINATION: MRI of the lumbar spine without contrast. 1/7/2018

COMPARISON: None.

Clinical statement: Exam Reason: low back pain, h/o disc injury, eval for tear/herniation EBM: Lumbar 8 mL gadavist, 0 discarded from a multi dose vial.

TECHNIQUE: Sagittal T1, sagittal T2, sagittal STIR, axial T1 and axial T2 weighted images of the lumbar spine were obtained. No IV contrast.

Findings:

Alignment: Normal.

Marrow: No evidence of marrow infiltrative process. No compression fracture. Modic type II endplate degenerative changes at L5-S1

Disks: Disc desiccation with disc height loss at L5-S1. Findings indicate disc degeneration.

Conus: Normal in appearance. Terminates at L1.

Paraspinous/retroperitoneal regions: Visualized portions unremarkable. Normal appearance of anterior and posterior longitudinal ligaments. No edema in the paravertebral soft tissues and no edema in the interspinous ligaments.

Lumbar spine degenerative changes:
