PERIPHERALS SUPPORT AND COMPATIBILITY
ODYSSEY NAVIGATOR™ 2018

Supported = a brand and model-specific hardware device for which Odyssey Navigator software has been developed and QA tested with specified Odyssey Navigator modules. Tyler Technologies will assist in providing support for issues that arise in an Enterprise Justice environment with devices identified as supported upon request.

Compatible = a hardware device that meets stated Odyssey Navigator compatibility requirements without any software customization or QA testing. End user is responsible for selection, evaluation and testing of brands and models to ensure that client-specific business processes and performance needs are met. For devices that require a PC host, consult the device manufacturer regarding PC operating system compatibility.

Notes:
- A TWAIN driver is required with any imaging scanner used with Odyssey Navigator products.
- The peripherals listed below are hardware devices that were available during the evaluation phase and tested to confirm they work in-house by Tyler Technologies. There are many options that will work, but it is not feasible for them to evaluate every model on the market when testing in-house. This list is intended as a starting point, but these are not the only options. Please consider additional models and updated models of previously supported and compatible hardware devices that are no-longer available for purchase.

PERIPHERAL DEVICE		
REPORT/RECEIPT/CHECK PRINTER	SUPPORTED	COMPATIBLE
8.5" x 11" Business Class Laser Printer (Ex: HP LaserJet Pro 4001dn)		✓
